

Are you Allergic to Gloves?

Are you over the age of 18?

Do you experience an allergic reaction to medical or surgical gloves?

If YES, you may be eligible for a quality improvement project centered around allergen avoidance in glove-induced allergic contact dermatitis.

Participants would undergo patch testing to confirm allergic reaction and would complete questionnaires before and after a one month trial of allergen-free gloves (provided).

Come identify which allergens in gloves are causing you to react so you can better avoid them!

Please ask your primary care provider to refer you to:
The Hand Dermatitis Clinic at the University of Alberta Dermatology Clinic
